

Adi Gur

Product Designer - UI/UX

EU Citizen | Based in Bucharest, Romania | adigur94@gmail.com | +40 756 266 862 | [LinkedIn](#) | [Portfolio](#)

Professional Summary

Product Designer with hands-on experience in end-to-end UX/UI design and a professional background in architecture that brings rare depth to digital product work. Skilled in Figma, design systems, prototyping, and user research - with a natural ability to think in systems, understand how people move through spaces and interfaces, and translate complex requirements into clear, intuitive experiences. Architecture trained my eye for spatial logic, human scale, proportion, and the relationship between form and function - all directly applicable to how I approach product design. Proficient across design and 3D software, comfortable working independently or within cross-functional teams, and actively integrating AI tools into my workflow.

Professional Experience

Product Designer - AI-Powered Web Application

Evertale | 2025 - Present | [Kids Story Generator - link](#)

End-to-end product design of a live AI-powered web application for children.

- Led the full UX process - defined product structure, user journeys, story-generation flows, and interaction logic from concept stage.
- Conducted user research and validation sessions with parents and children; maintained user personas and journey maps to keep decisions user centric.
- Designed responsive, mobile-first interfaces - wireframes through to high-fidelity prototypes - with strong attention to visual hierarchy and usability.
- Built and maintained a scalable component-based design system in Figma - Auto Layout, variants, style tokens, Dev Mode handoff.
- Collaborated closely with developers on feature scope, edge cases, and technical feasibility across iterative product cycles.
- Actively integrated AI tools throughout the design workflow - concept generation, rapid prototyping, and interaction exploration.

Architectural Designer

Architecture Firms | 2021 - 2025 | Full-time

5 years of professional design across residential, mixed-use, commercial, industrial, and urban-scale projects - directly shaping my approach to product design.

- Systems thinking & complex environments - designed spatial systems where user flow, functionality, and hierarchy needed to work together, forming the basis for my approach to digital product structure and information architecture.
- Human-centred design - focused on how people interact with physical spaces, translating into intuitive, user-focused interface thinking.
- Scalable design systems - developed and maintained visual and technical standards across projects and teams, comparable to UI component systems in digital products.
- 3D & visual communication - created photorealistic models and technical drawings, combining aesthetic judgment with precision and clarity of communication.
- Cross-disciplinary collaboration - worked closely with engineers, consultants, and clients in fast-paced project environments similar to product development teams.

Skills & Software

UX Design	User Research - User Personas - User Journey Mapping - Task Analysis - Information Architecture - Wireframing (Low-High Fidelity) - Usability Testing - Interaction Design - Accessibility
UI Design	Visual Hierarchy - Typography - Colour Systems - Responsive & Mobile First Design - Component Based Design - Prototyping - High-Fidelity Mockups - Design System Architecture & Maintenance
Software	Figma (Advanced - Components, Auto Layout, Variables, Dev Mode) - Adobe Photoshop (Advanced) - Adobe Illustrator - Canva - Revit (BIM) - AutoCAD - SketchUp - Rhino - Lumion
Strengths	Systems Thinking - Spatial & Human Understanding - Complex Problem Solving - Cross Functional Collaboration - Independent Work - AI-Integrated Workflow - Detail-Oriented

Education

Bachelor of Architecture (B.Arch.)

Tel Aviv University | 5-Year Professional Programme
